

Health, Safety and Environment Strategy

Lundbeck's Health, Safety & Environment (HSE) Policy sets out a common framework for how Lundbeck is protecting the environment and providing sound physical and mental working conditions.

The Policy is supported by our HSE Strategy, illustrated in the figure below, and our 5 Positions documents on [Climate Action](#), [Environmental Footprint](#), [Water](#), [Biodiversity](#), and [Health and Safety at Work](#).

We annually revisit the strategy and, based on data, trends and legislation, we set ambitious targets.

2025 targets:

- Zero environmental incidents with an impact on the environment
- Recycle 63% of selected solvents used in Chemical production in 2025
- Recycle 70% of non-hazardous waste in 2025
- Reduce CO2 emissions (Scope 1 and 2) by 42% in 2029 compared to 2019
- Reduce CO2 emissions (67% of Scope 3) by 25% in 2029 compared to 2019
- Reduce scope 1 and 2 emissions by at least 27% compared to 2019
- Renewable electricity share at 85% in 2025
- Lost Time Incident rate ≤ 3

Our HSE activities are coordinated and prioritised through our HSE management system, which are certified according to the international standards ISO 45001 for Health & Safety and ISO 14001 for Environment. The management system covers our corporate headquarters and larger research, development, and manufacturing facilities.

Managers and employees collaborate to create the best working conditions and minimise our impact on the environment. The fundament of our approach is the identification of risks and opportunities by systematically assessing working situations and performing risk assessments before making any physical or organisational changes.

We are committed to transparency and maintain an open and honest dialogue with our stakeholders, e.g. by reporting our HSE policies, actions and targets in our Annual Report.

These efforts underpin our commitment to the UN Global Compact and show our contribution to the UN Sustainable Development Goals: 8 Decent Work and Economic Growth, 12 Responsible consumption and production and 13 Climate action.

Facts on ISO 14001 and ISO 45001

ISO 14001 and ISO 45001 are international standards setting the requirements for Environment and Health & Safety Management Systems respectively. The standards help businesses to systematically identify and control all relevant impacts and hazards resulting from normal operations and abnormal situations and thereby improve performance. Lundbeck has integrated both systems which consist of written procedures and annual performance targets. They are communicated and integrated into daily operations via training. Compliance and improvements are evaluated by internal and external auditors and the business' senior management reviews the overall system performance annually.
